I build — and run — the back-office system your gym actually uses.

POS, CRM, memberships and the automation that keeps them in sync. One developer, end to end: design, build, migrate, monitor. No handoff gaps, no “it worked in staging”.

01
POS & inventory
Checkout, receipts, stock, shifts, offline-safe. Built for counter speed, not for a demo.

02
CRM & memberships
Members, renewals, classes, leads and billing in one record. No spreadsheet behind the counter.

03
Automation & sync
Scheduled reconciliation, alerts, reporting jobs. The boring work, handled.

04
Migration & rescue
Take over a stalled or offline system, move the data, keep the shop open while you do it.

2,600+
transactions processed on a system I built and operate

RM 139.9k
revenue handled, reconciled against the counter every month

0 min
downtime during a full legacy cutover — the counter never closed

30 min
automatic reconciliation cycle, with failure alerts

LIVE SINCE JULY 2026 · MEASURED ON THE PRODUCTION GYM SYSTEM

How we work together

Audit & blueprint	US$300–500	Fixed fee, one-off. I watch how your desk actually works, find where the hours go, and hand you a written plan you keep — whether or not you build with me.
Build	US$6,000–12,000	Fixed scope, fixed price, phased. Includes the data migration and staff training. 30% to start each phase, 70% on acceptance.
Care plan	US$400–1,200/mo	Monitoring, backups with monthly restore tests, patches, small changes, one automation a month. A system nobody maintains is how you end up back on spreadsheets.
Add-ons	US$1,000–3,000	Data migration from a messy legacy export, reporting automation, AI assistant over your own data (API usage passed through at cost).

One boutique gym, one system, zero downtime.
Before: one Excel tab per trading day, every sale keyed by hand, the maths at closing time. After: one screen at the counter, and a report that reconciles itself.
